

# Heart Failure (HF) Episode Description

Signify Health Version 1.1

An episode of care, also known as an episode, groups all relevant services provided to a patient for a particular condition within a confined time range. An episode of care serves as a unit of accounting as well as a unit of accountability for providers who take on financial risk for the episode. Defining an episode in such a manner helps to identify sources of variation and to standardize care.

An episode of care for Heart Failure, sometimes abbreviated HF, is a chronic condition episode. There is a 30-day lookback period to capture services rendered prior to the trigger claim, such as diagnostic services, office visits, and ancillary services. The Heart Failure episode does not have an end date regarding the look-forward period, but can be broken into distinct reporting periods for implementations (e.g., 12 months).

## Episode Components

Triggers	A Heart Failure episode can be triggered by an inpatient facility claim with a trigger principal diagnosis code for the condition (See Table 1) or an outpatient facility or professional claim with a trigger diagnosis code (in any position) and an E&M procedure code (in any position) on the same claim line. For professional claim triggers a second trigger signal or confirming claim is required that meets the same criteria as any of the initial trigger claims above. The confirming claim must be at least 30 days after the initial trigger claim.
Typical Diagnosis	Typical diagnosis codes (ICD 10 DX codes) indicate typical care. Claims with typical diagnosis codes usually associated with an episode help steer services into this episode. However, a relevant procedure code is required on the same claim/claim line for the indicated diagnosis code to be incorporated into the episode. (Table 2)
Actionable adverse events (AAE)	Actionable adverse events (AAE) are events that are recognized by diagnosis codes (ICD 10 DX codes) and their timing to indicate potential complications of care. They require a relevant procedure code (ICD 10 PX codes; CPT/HCPCS codes) on the same claim/claim line to assign the claim to the episode.

	Additional rules are used to identify AAEs in addition to the presence of AAE diagnosis codes. For example, for chronic episodes, relevant acute inpatient admissions claims are flagged as actionable adverse events regardless of the presence of AAE codes.) (Table 3)
Relevant Procedure Codes	All relevant services within the timeframe of an episode are included within an episode. These include office visits, emergency room visits, inpatient professional or facility services, labs, radiology or ancillary services. Relevant diagnoses and procedure codes help identify which services are included. Some procedure codes are sufficient to stand alone, while others require typical or actionable adverse event (AAE) diagnosis codes on the same claim/claim line to steer services into the episode. (Tables 4 and 5)
Relevant Pharmacy	All relevant pharmacy services are included within an episode. These are identified by National Drug Codes (NDC) on a pharmacy claim and are grouped using the RxNorm grouping classification for ease of assigning them into episodes. (Table 6)
SubTypes	<p>Episode subtypes are used to adjust the target price and/or to subset episode type for reporting purposes. They are specific to the episode and identified from the trigger claim or from claims during the look-back period.</p> <p>Examples of Subtype Groups:</p> <ul style="list-style-type: none"> <li>• Cardiomyopathy</li> <li>• LVEF &lt; 40% or LV systolic dysfunction</li> <li>• Heart Aneurysm and other Sequelae of AMI</li> </ul>
